

Consider This:

Your brain is composed of 100 billion cells.

Each cell is connected to as many as 20,000 other cells.

These connections are a complex network of ganglia and dendrites.

The combinations and variations that can be formed in your brain outnumber the molecules in the known universe.

Therefore, your ideas are virtually unlimited.

Creativity, like your brain, is a muscle.

"Creativity" is another word for improvement.
